

| LESSON PLAN 1ST SEMESTER SESSION (2025-26) | |
|--|---|
| NAME OF THE LECTURER: | Pooja Kumari |
| CLASS AND SECTION: | B.Sc. 1 ST Sem. |
| SUBJECT: | MECHANICS |
| | |
| | ASSIGNMENTS |
| Week 1 | <ul style="list-style-type: none"> • Orientation • Fundamentals of Dynamics: Rigid body, moment of inertia • Radius of Gyration • Theorems of perpendicular and parallel axis • Moment of inertia of rod |
| Week 2 | <ul style="list-style-type: none"> • Moment of inertia of ring, disc, angular disc, solid cylinder, solid sphere, hollow sphere |
| Week 3 | <ul style="list-style-type: none"> • Moment of inertia of rectangular plate, square plate, solid cone • Torque, rotational K.E, angular momentum, law of conservation of angular momentum |
| Week 4 | <ul style="list-style-type: none"> • Rolling motion , condition of pure rolling, acceleration of body rolling down an inclined plane • Fly wheel, moment of inertia of an irregular body • Elasticity: deforming force |
| Week 5 | <ul style="list-style-type: none"> • Elastic limit • stress and strain • stress and strain & their types • Hooks law • Module of elasticity, Relation between shear angle and angle of twist, elastic energy stored in an elastic body |
| Week 6 | <ul style="list-style-type: none"> • Elongation produced in heavy rod due to its own weight , tension in rotating rod • Poison's ratio & its limiting values, elastic constants and their relations • Torque required for twisting cylinder |
| Week 7 | <ul style="list-style-type: none"> • Bending of beam, bending moment and its magnitude • Flexural rigidity, geometrical moment of inertia for beam of rectangular cross section • Bending of cantilever |

| | |
|----------------|--|
| Week 8 | <ul style="list-style-type: none"> • Weight of cantilever uniformly distributed over its length • Dispersion of a centrally loaded beam supported at its ends. • Determination of elastic constants for material of wire by Searle's method |
| Week 9 | <ul style="list-style-type: none"> • Special theory of relativity: Michelson's Morley experiments and its outcomes • Postulates of special theory of relativity |
| Week 10 | <ul style="list-style-type: none"> • Lorentz transformations • Lorentz contraction • Time dilation • Relativistic transformation of velocity |
| Week 11 | <ul style="list-style-type: none"> • Relativistic addition of velocity • Variation of mass energy equivalence • Relativistic doppler effect, kinematics |
| Week 12 | <ul style="list-style-type: none"> • Transformation of energy and momentum • Transformation of force, problems of relativistic dynamics • Gravitation and central force motion • Law of gravitation |
| Week 13 | <ul style="list-style-type: none"> • Potential and field due to spherical shell • Potential and field due to solid sphere • Motion of a particle under central force field • Two body problem and its reduction to one body problem and its solution |
| Week 14 | <ul style="list-style-type: none"> • Compound pendulum or physical pendulum in form of elliptical lamina and expression of time period • Determination of g by bar pendulum • Normal coordinates & normal modes • Normal modes of vibration for given spring mass system |
| Week 15 | <ul style="list-style-type: none"> • Angular frequencies of oscillation of two identical simple pendulum joined together |
| Week 16 | <ul style="list-style-type: none"> • Discussion & revision • Unit test |

LESSON PLAN

1ST SEMESTER
SESSION (2025-26)

| | |
|-----------------------|--|
| NAME OF THE LECTURER: | Pooja Kumari |
| CLASS AND SECTION: | B.Sc. Medical 1 ST (Minor) |
| SUBJECT: | ELEMENTARY MECHANICS |
| | |
| | ASSIGNMENTS |
| Week 1 | <ul style="list-style-type: none">• Orientation• Fundamentals of Dynamics: Rigid body, moment of inertia• Radius of Gyration |
| Week 2 | <ul style="list-style-type: none">• Theorems of perpendicular and parallel axis• Moment of inertia of ring, disc |
| Week 3 | <ul style="list-style-type: none">• Moment of inertia of angular disc• Moment of inertia of solid cylinder• Unit test 1 |
| Week 4 | <ul style="list-style-type: none">• Elasticity: deforming force• Elastic limit• stress and strain |
| Week 5 | <ul style="list-style-type: none">• stress and strain & their types• Hooks law• Module of elasticity |
| Week 6 | <ul style="list-style-type: none">• Relation between shear angle and angle of twist• Poison's ratio & its limiting values |
| Week 7 | <ul style="list-style-type: none">• Torque required for twisting cylinder• Unit test 2 |
| Week 8 | <ul style="list-style-type: none">• Special theory of relativity: Michelson's Morley experiments and its outcomes |

| | |
|----------------|--|
| Week 9 | <ul style="list-style-type: none"> • Postulates of special theory of relativity • Lorentz transformations |
| Week 10 | <ul style="list-style-type: none"> • Lorentz contraction • Time dilation • Relativistic transformation of velocity |
| Week 11 | <ul style="list-style-type: none"> • Relativistic addition of velocity • Variation of mass energy equivalence • Discussion |
| Week 12 | <ul style="list-style-type: none"> • Gravitation and central force motion • Law of gravitation • Potential and field due to spherical shell |
| Week 13 | <ul style="list-style-type: none"> • Potential and field due to solid sphere • Motion of a particle under central force field |
| Week 14 | <ul style="list-style-type: none"> • Normal coordinates & normal modes • Normal modes of vibration for given spring mass system • Angular frequencies of oscillation of two identical simple pendulum joined together |
| Week 15 | <ul style="list-style-type: none"> • Angular frequencies of oscillation of two identical simple pendulum joined together • Unit test 3 |
| Week 16 | <ul style="list-style-type: none"> • Discussion & revision • Unit test 4 |
